

MAINTENANCE

All maintenance is included with contract rental price and every system will have at least two maintenance inspections per year.

Maintenance includes the cleaning of all systems and filters checked. These checks are done in addition to the on-board microprocessor, which constantly monitors the activated oxygen injection, filters, and gallon usage.

Maintenance – System Inspection

1. Visual Inspection
2. Hose & fitting inspection
3. Electrical inspection
4. Pressure & flow test (Is it making the correct amount of water)
5. Filter timing/consumption reset
6. Gallon usage recorded
7. Clean the exterior of system and condenser coils in the rear of system
8. Water heater on
9. Temperature check (Cold should be 50 degrees or below, Hot should be 160 degrees or above)
10. Water analysis (TDS check)
11. Site clean up
12. Check with key contact person regarding any further services required that **Think Healthy Systems** can provide.

Data Management

All maintenance inspections will be logged for case history – Maintenance History Reports can be provided anytime by request.
